PROFILE

Cybersecurity graduate with security operations internship experience and hands-on Web3 development experience. Conducted incident monitoring, log collection and analysis, potential threat identification, and reporting in simulated security operations environments. Developed applications involving Aptos and Lens Protocol; familiar with cryptocurrency trading and exchange accounts through personal experience. Seeking to apply security analysis, troubleshooting, and technical collaboration skills to risk control at a cryptocurrency exchange.

EDUCATION & SKILLS

Fujian Agriculture and Forestry University Sep 2021 - Jun 2025

Bachelor of Engineering in Cyberspace Security

Relevant Coursework: Computer Forensics, Fundamentals of Cryptography, Database Security, Software Reverse Engineering, Computer Networks.

Honors: University Merit Scholarship, Fujian Agriculture and Forestry University (2022).

Technical Skills: Python, TypeScript, Solidity, MySQL, Linux, Git, Docker, Remix, React, Next.js.

Languages: Mandarin Chinese (native); English (CET-4 and CET-6 certificates; TOEFL 90/120); Japanese (conversational).

Trading Experience: Personal cryptocurrency trading and exchange account use, with firsthand exposure to trading risks.

INTERNSHIP EXPERIENCE

National Cybersecurity Center (NCC) Jul 2023 - Aug 2023

Security Operations Services Engineer Intern Wuhan, China

- **Monitoring and detection:** Completed multi-scenario security operations tasks in a simulated environment, practicing security incident monitoring, log analysis, threat detection, and incident response.
- **Data analysis and reporting:** Used Qi-Anxin Jiaotu and Tianyan security tools to monitor real-time security events; collected, cleaned, and analyzed logs to identify potential threats and prepared detailed reports to support team assessments.
- **Investigation and remediation:** Participated in red-team/blue-team exercises; helped identify and remediate network architecture vulnerabilities in simulated attack scenarios and supported improvements to security defense strategies.

WEB3 PROJECTS

Zero-Knowledge Proof-Based Blockchain Social Platform Started Dec 2024

github.com/GeeekerK/o3o | Lens Protocol, NFTs, Zero-Knowledge Proofs

- Developed decentralized identity management using Lens Protocol by linking user information to unique NFTs. Used zero-knowledge proofs to verify required information while protecting user privacy.
- Designed NFC interactions between rings and smartphones to display user profiles. Integrated NFT collection display and trading features, gaining experience with on-chain identity, digital assets, and application interactions.

Aptos On-Chain Card Game (Web3) Apr 2024 - May 2024

github.com/GeeekerK/Guandan | Smart Contracts, On-Chain Randomness, NFTs

- Implemented on-chain randomness through smart contracts for random team assignment, card draws, and NFT reward allocation by rarity, with game fairness guiding the on-chain business logic.
- Integrated social features and offline event scenarios, enabling participants to earn NFT badges at Web3 events and building experience in on-chain applications and user interaction flows.

COMMUNITY & KNOWLEDGE SHARING

Zhejiang University Student Blockchain Association (ZJUBCA) Jan 2024 - Dec 2024

- Developed and maintained ZJUBCARoadmap, an open-source knowledge base for blockchain beginners. Organized a three-week technical sharing series covering zero-knowledge proofs and blockchain oracle projects.
- Participated in hackathons including ETH Shenzhen, ETH Beijing, and EDCON Tokyo.
